

LabSen® 751 Spear pH Electrode User Manual

LabSen® pH electrodes are made with proprietary sensor technologies and key components from Switzerland. LabSen® 751 spear pH electrode adopts a spear glass membrane, which can easily pierce into solid or semi-solid medium. This probe is designed for pH measurement of food samples such as cheeses, meats, sushi rice, dough, and fruits.

Features

- LabSen® S-type spear sensor tip featured with high firmness and fast response, designed for direct measurement of solid/semi-solid samples
- Food-grade titanium sheath, providing strong protection to the sensor
- Open& Ceramic double-junction with Polymer electrolyte. No more junction clogs.
- Long life reference system improves the stability of the reference system and extends the electrode's service life.
- Blue gel inner solution does not flow and will not generate air bubbles.

Technical Specifications

Measuring Range	0 – 14 pH
Temperature Range	0 – 80 °C
Body Material	Food-Grade Titanium
Reference	Long Life
Junction	Ceramic + Open
Reference Solution	Polymer
Soaking Solution	3M KCL
Electrode Dimension	Electrode (Φ12×115) mm Measuring Tip (Φ6×50) mm
Connector	BNC
Cable	Ф3×1m

How to use

1. Insert the blue BNC connector of the electrode to the BNC socket of your pH meter while twisting clockwise until it's locked.

- 2. Before measuring, twist off the storage bottle cap (see graph on the right), pull out the electrode and rinse it off with distilled or deionized water.
- Perform at least a two-point calibration before measuring after connecting the new electrode to your pH meter.
- 4. Spear pH Electrode is suitable for measuring wet solids or semi-solid mediums. Be careful not to use excessive force when piercing the electrode into samples. If the sample medium is too hard, please cut a small hole with a knife before piercing the electrode into it.

Maintenance

- 1. When not in use, the electrode should be soaked in the storage bottle containing 3M KCL soaking solution to keep the glass membrane and junction in a healthy condition. Clean the bottle and replace the soaking solution if it gets contaminated. The electrode should never be stored in pure water such as deionized or distilled water.
- 2. The electrode is only as accurate as it is clean. Always thoroughly rinse off the probe before and after each measurement with pure water in a container or with a wash bottle.
- 3. The transparent polymer gel electrolyte will inflate and ooze out a bit when it's soaked in KCL solution. This will not affect the measurement of the electrode, and it will happen more frequently with newer electrodes. This is a "self-clean" situation especially when the junction gets contaminated. Just wipe off the inflated gel with clean tissue and continue to use the electrode as normal.
- 4. For tough contaminants, soak the electrode in Apera cleaning solution (Al1166) for 30 minutes. Then use a soft brush to remove the contaminants. Afterwards, soak the electrode in 3M KCL soaking solution for at least 1 hour. Rinse it off, then re-calibrate it before using again.
- The connector of the electrode should be kept clean and dry. If contaminated, please clean it with medical cotton and isopropyl alcohol and blow-dry it to prevent short circuit of the electrode or slow response of the electrode.
- 6. The electrode should avoid testing strong acid and strong alkali solutions, as well as dehydrating media such as absolute ethanol and concentrated sulfuric acid. If testing such solutions, the

immersion time should be minimized and the electrode should be carefully cleaned after use.

7. Every pH electrode will eventually age and fail. The typical service life of Apera pH electrodes is 12-

24 months depending on the frequency of usage and how well you keep it clean and properly stored.

We recommend replacing your electrode every 12-18 months to ensure the best accuracy.

Warranty

We warrant this electrode to be free from defects in material and workmanship and agree to repair or replace free of charge, at option of APERA INSTRUMENTS, LLC, any malfunctioned or damaged product attributable to responsibility of APERA INSTRUMENTS, LLC for a period of SIX MONTHS from the delivery.

This limited warranty does NOT cover any damages due to:

Accidental damage, transportation, storage, improper use, failure to follow the product instructions or to perform any preventive maintenance, unauthorized repair or modifications, normal wear and tear, or other external causes or actions beyond our reasonable control.

To get the fastest warranty fulfillment, go to <u>support.aperainst.com</u> and click "New Support Ticket" on the upper right corner. Type your email in the requester field, "Warranty" in the Subject field, and then input the following information in the description field:

- Your full name
- Product model that needs warranty fulfillment
- Serial number of the product (can be found on the back sticker of the tester body)
- What problem or issue you had experienced with the product
- Attach a photo of your proof of purchase
- Attach a photo of the problematic product

Then click Submit. One of our customer care specialists will help you fulfill the warranty within one business day.
